

sub D3 46. (Amended) The process according to claim 41, characterized in that passenger proteins or parts thereof are chemically or enzymatically modified on the bacterial surface.

47. (Amended) The process according to claim 46, characterized in that the modification is a non-covalent modification.

48. (Amended) The process according to claim 46, characterized in that the modification is a covalent modification.

C2 49. (Amended) The process according to claim 48, characterized in that the modification is a glycosylation.

50. (Amended) The process according to claim 48, characterized in that the modification is a phosphorylation.

51. (Amended) The process according to claim 46, characterized in that the modification is a proteolysis.

52. (Amended) The process according to claim 51, characterized in that passenger proteins or parts thereof are selectively released from the bacterial surface by intrinsic or externally added proteases.
